

EMBOLIC COMPOSITIONS WITH NON-CYANOACRYLATE
RHEOLOGY MODIFYING AGENTS

ABSTRACT

5 Compositions for embolization are disclosed herein.
The compositions disclosed can have a matrix-forming
component, a solid-aggregate material, and a rheology
modifying agent, wherein the matrix-forming component
10 includes at least alkyl cyanoacrylate monomers, a
stabilizer, and a plasticizer, and the solid-aggregate
material includes at least a radiopacifier. The
composition and a method of administering the composition
are useful for treating vasculature abnormalities,
15 particularly when the composition solidifies upon contact
with an ionic environment, such as blood.
